DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Avins and in further view of Puckette.

Claim 1, Avins discloses evaluating the positions of the signal transitions between respective two adjacent logical signal values for correcting the phase of the clock (abstract), Avins fails to disclose the position of a signal transition between a first pair of signal values on a first level, or a second pair of signal values on a second level is weighted stronger in the evaluation than the positions of signal transitions between adjacent single signal values of different signal levels. However, Puckette discloses weighting of the signal transitions in terms of the multi-level value of the signal (col. 1, 64-66).
